

Jolly Steel

A professional stainless steel vacuum machine also suitable for the domestic environment: it takes up little space but is a concentrate of power.

The pump is fast and reliable, it was designed to allow intense and prolonged use of the packaging machine without ever stopping. The sealing bar guarantees a high number of consecutive seals thanks to technical solutions derived from larger machines. Jolly Steel will never abandon you even during work.

small size, suitable for both professional and domestic users.

The stainless steel structure gives this vacuum sealer a robust and professional appearance and allows it to integrate into any work environment or home kitchen.

The machine boasts extreme reliability: the control panel is electromechanical and the pump is self-lubricating therefore it does not require oil topping up, filter replacement or other maintenance. The machine is designed and manufactured in Italy.

The technical solutions adopted on the packaging machine are derived from higher-end vacuum machines: TECLA Jolly Steel is equipped with a pointer pressure indicator (vacuum gauge) - which guarantees a much more accurate measurement than that provided by the digital and LED indicators of the machines lower range - and adjustment of the sealing time, which allows it to adapt to more or less thick envelopes.

Technical specifications	
Model	Jolly Steel
Power	400 Watt
Sealing bar	330 mm
Voltage	230 Volt - 50 Hz
Vacuum pump	Lt 15/min
Material	Stainless Steel
Cycle control	Electronic Card
Dimensions	cm 35,5 x30 x h16
Weight	7 KG
Rules	CE
